

Surgical Pathology Report

SPECIMEN(S) RECEIVED

A: Uterus, tubes and ovaries

CLINICAL INFORMATION

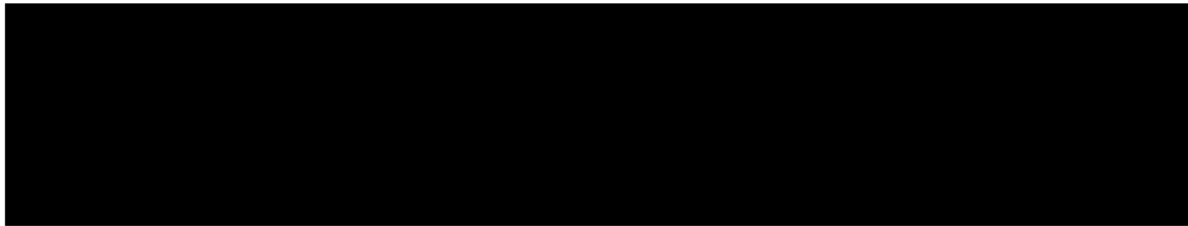

ENDOMETRIUM THICKENED, ENDOMETRIAL POLYP, STENOSIS

PRE OP DIAGNOSIS

ENDOMETRIUM THICKENED, ENDOMETRIAL POLYP, STENOSIS OF CERVIX, INCOMPLETE UTEROVAGINAL PROLAPSE, VAG

FINAL DIAGNOSIS

Uterus, bilateral fallopian tubes and ovaries, supracervical hysterectomy and bilateral salpingo-oophorectomy:
Myometrium with leiomyoma.
Endometrium, bilateral ovaries and fallopian tubes, within normal limits.

GROSS DESCRIPTION

Received in formalin labeled as "uterus, fallopian tubes and ovaries" is a supracervical uterus measuring 4.5 x 3.5 x 2.5 cm and weighs 26g. The right fallopian tube measures 5 x 0.5 x 0.5 cm and the right ovary measures 2.5 x 1.3 cm. The left fallopian tube measures 5 x 0.5 x 0.5 cm and the left ovary measures 2 x 1.2 x 0.8 cm. There is a fibroid on the serosal surface, 2 cm in greatest dimension. Serial sectioning of the uterus reveals unremarkable triangular endometrial cavity and the endometrium measures 0.2 cm in thickness. The myometrium, ovary and fallopian tubes are unremarkable. Representative sections are submitted as following: A1, anterior endomyometrium; A2, posterior endomyometrium with fibroid; A3, right fallopian tube and ovary; A4, left fallopian tube and ovary.

MICROSCOPIC DESCRIPTION

Unless "gross only" is specified, the final diagnosis for each specimen is based on a microscopic examination of representative sections of tissue.
