

*Histology Cytology Report*

**Clinical Information**

Preoperative diagnosis: Deep endometriosis of the pelvic peritoneum

Clinical data:

Postoperative diagnosis: Pending

Special instructions:

Specimen source: A. Left ovarian fossa; B. Left periureteral; C. Uterine tissue

**Diagnosis**

**A. LEFT OVARIAN FOSSA, EXCISION:**

ELASTOTIC SCAR WITH DYSTROPHIC MINERALIZATION.

**B. LEFT PERIURETERAL PERITONEUM, EXCISION:**

NO SIGNIFICANT HISTOPATHOLOGIC ABNORMALITY.

**C. UTERINE TISSUE, EXCISION:**

FRAGMENTS OF SMOOTH MUSCLE, CONSISTENT WITH UTERINE LEIOMYOMA.

**Gross Description**

A. In formalin labeled "left ovarian fossa" is a 0.5 cm tan tissue fragment. Entirely, one block.

B. In formalin labeled "left periureteral" is a 1.5 x 1 x 0.2 cm tan tissue fragment. The specimen is sectioned and entirely submitted, one block.

C. In formalin labeled "uterine tissue" is a 4 x 4 x 2 cm aggregate of pink-tan and focally cauterized soft tissue fragments. Sampled, 3 blocks.

**Microscopic Description**

A., B., C. Gross description reviewed and microscopic examined.
