

Surgical Pathology Report

SPECIMEN(S) RECEIVED

- A: Endocervical curettings
- B: Endometrial curettings
- C: Left ovarian fossa, biopsy
- D: Right fallopian tube cyst
- E: Portion of left ovary

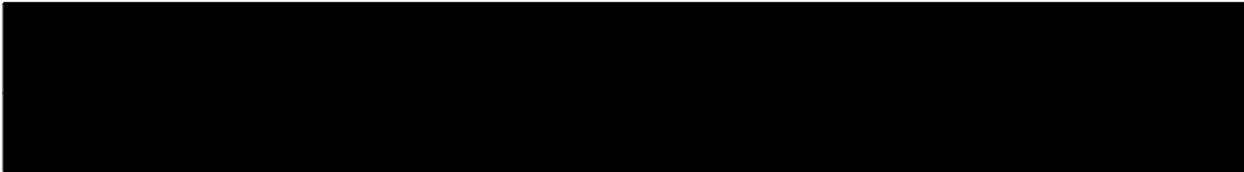

CLINICAL INFORMATION

Dysmenorrhea, polycystic ovarian syndrome, pelvic/ perennial pain

PRE OP DIAGNOSIS

Dysmenorrhea, polycystic ovarian syndroms, pelvic/perineal pain

FINAL DIAGNOSIS

- A. Endocervical curettings:
 - Polypoid fragment of benign endocervical mucosa
 - Benign squamous epithelium
 - B. Endometrial curettings:
 - Endometrial polyp
 - Secretory endometrium
 - Benign squamous epithelium
 - Benign endocervical glands
 - C. Left ovarian fossa, biopsy:
 - Endometriosis involving fibroadipose tissue
 - D. Right fallopian tube cyst:
 - Fibroadipose tissue with reactive changes and features suggestive of endometriosis
 - E. Portion of left ovary:
 - Corpus luteum cyst
- 

GROSS DESCRIPTION

The specimen is received in four parts.

Part A, received in formalin is (are) multiple piece(s) of tan brown soft tissue measuring 0.4 cm. in greatest dimension. Entirely submitted in A1.

Part B, received in formalin is (are) # piece(s) of tan hemorrhagic tissue and mucoid material measuring 1.5 cm. in greatest dimension. Entirely submitted in B1.

Part C, received in formalin is (are) 1 piece(s) of tan white soft tissue measuring 1.0 cm. in greatest dimension. Entirely submitted in C1.

Part D, received in formalin is (are) 1 piece(s) of tan yellow soft tissue measuring 1.2 cm. in greatest dimension. Entirely submitted in D1.

Part E, received in formalin is (are) 1 piece(s) of pale tan brown soft tissue measuring 1.1 cm. in greatest dimension. Entirely submitted in E1.

MICROSCOPIC DESCRIPTION

Unless "gross only" is specified, the final diagnosis for each specimen is based on a microscopic examination of representative sections of tissue.
