

Histology Cytology Report

Clinical Information

Preoperative diagnosis: Mild cervical dysplasia, Dysuria, Cystocele, Midline, Intrinsic sphincter deficiency

Clinical data:

Postoperative diagnosis: Same

Special instructions:

Specimen source: A. Colonic adhesions; B. Left periureteral

Diagnosis

A. COLONIC ADHESIONS, EXCISION:

FIBROMEMBRANOUS TISSUE, CONSISTENT WITH PERITONEAL ADHESIONS.

B. LEFT PERIURETERAL PERITONEUM, EXCISION:

ENDOMETRIOSIS.

Gross Description

A. Received in formalin labeled "colonic adhesions" is a 3.1 cm long portion of tan-grey membranous tissue with a 0.2 cm diameter, grossly consistent with an adhesion. Sectioned and entirely submitted, 1 block.

B. Received in formalin labeled "left periureteral" is a 1.0 x 0.7 x 0.2 cm portion of tan membranous tissue. The resection margin is inked black. Specimen is sectioned and entirely submitted, 1 block.

Microscopic Description

A and B. Gross description reviewed and microscopic examined.
