

Histology Cytology Report

Histology-Cytology Report –

Clinical Information

Preoperative diagnosis: Deep Endometriosis of the Pelvic Peritoneum, Pelvic and Perineal Pain

Clinical data: Bilateral

Postoperative diagnosis: Pending

Special instructions:

Specimen source: A. Left Upper Sidewall; B. Periappendiceal; C. Left Cyst; D. Right Cul de sac; E. Fallopian Tube

Rectal Wall; F. Midline Cul de sac

Diagnosis

A. LEFT UPPER SIDEWALL PERITONEUM, EXCISION:
ENDOMETRIOSIS.

B. PERIAPPENDICEAL PERITONEUM, EXCISION:
ENDOMETRIOSIS

C. LEFT FALLOPIAN TUBE CYST, EXCISION:
BENIGN SEROUS PARATUBAL CYST.

D. RIGHT PELVIC CUL-DE-SAC, EXCISION:
SUBPERITONEAL FIBROSIS.

E. RECTAL WALL, EXCISION:
ENDOSALPINGOSIS.

F. MIDLINE PELVIC CUL-DE-SAC, EXCISION:
ENDOMETRIOSIS.

Gross Description

A. In formalin labeled "left upper sidewall" is a 1.5 x 0.8 x 0.3 cm portion of membranous tissue with attached adipose tissue. Sectioned and entirely submitted, 1 block.

Histology Cytology Report

Gross Description

B. In formalin labeled "periappendiceal" is a 0.7 x 0.5 x 0.3 cm portion of membranous tissue. Sectioned and entirely submitted, 1 block.

C. In formalin labeled "left fallopian tube cyst" are 2, 0.3 and 0.6 cm portions of tissue with a 0.2 cm cyst. Entirely submitted, 1 block.

D. In formalin labeled "right cul-de-sac" is a 1 x 0.8 x 0.5 cm portion of membranous tissue with attached adipose. Sectioned and entirely submitted, 1 block.

E. In formalin labeled "rectal wall" is a 1.5 x 0.5 x 0.3 cm portion of membranous tissue with attached adipose. Entirely submitted, 1 block.

F. In formalin labeled "midline cul-de-sac" is a 1.5 x 0.7 x 0.6 cm portion of membranous tissue with attached adipose. Sectioned and entirely submitted, 1 block.

Microscopic Description

A through F. Gross description reviewed and microscopic examined.
