

Surgical Pathology Report

SPECIMEN(S) RECEIVED

A: Left pelvic sidewall, biopsy
B: Right fallopian tube and ovary
C: Left fallopian tube and ovary
D: Left periureteral, biopsy

CLINICAL INFORMATION

ENDOMETRIOSIS

PRE OP DIAGNOSIS

ENDOMETRIOSIS

FINAL DIAGNOSIS

- A. Left pelvic sidewall, biopsy:
- Benign fibromuscular tissue
- B. Right fallopian tube and ovary, salpingo-oophorectomy:
- Ovary with surface adhesion
- Fallopian tube with focal foreign body-type giant cell reaction
- C. Left fallopian tube and ovary, salpingo-oophorectomy:
- Leydig cell hyperplasia of ovary
- Unremarkable fallopian tube
- D. Left periureteral, biopsy:
- Benign fibroadipose tissue

GROSS DESCRIPTION

Received specimen x 4.

Part A, received in formalin is/are 1 tan soft tissue measuring 0.5 cm in aggregate/greatest dimension. The specimen is entirely submitted in cassette A1.

Surgical Pathology Report

Part B, received in formalin is 1 tan white ovary 3.5 x 1 x 1 cm with separated fallopian tube 6 x 0.5 cm. There is also a plastic tube noted. Rep in B1.

Part C, received in formalin is 1 tan white ovary 2.5 x 1.5 x 1 cm with separated fallopian tube 6 x 0.6 cm. Rep in C1.

Part D, received in formalin is 1 tan soft tissue measuring 1 cm in aggregate/greatest dimension. The specimen is entirely submitted in cassette D1.

MICROSCOPIC DESCRIPTION

Unless "gross only" is specified, the final diagnosis for each specimen is based on a microscopic examination of representative sections of tissue.
