Gross Description

A. In formalin labeled "endocervical curetting", is a 2.3 x 1.0 x 0.2 cm aggregate of tan-pink tissue fragments. All, 1 block.

B. In formalin labeled "endometrial curettings", is a 2.5 x 2.5 x 0.4 cm aggregate of tan-red tissue fragments admixed with an abundant amount of clotted blood. All, 1 block.

C. In formalin labeled "left bladder flap", is a 0.7 x 0.5 x 0.2 cm white-pink tissue fragment. The specimen is bisected. All, 1 block.

D. In formalin labeled "left periureteral", is a 2.2 x 0.5 x 0.2 cm tan-pink tissue fragment. The specimen is trisected. All, 1 block.

E. In formalin labeled "left ovarian fossa", is a 1.3 x 0.8 x 0.2 cm white-pink tissue fragment. The specimen is bisected. All, 1 block.

F. In formalin labeled "left uterosacral ligament" is a 2.3 x 1.0 x 0.2 cm tan-pink tissue fragment. The specimen is trisected. All, 1 block.

G. In formalin labeled "left ovarian ligament", is a 1.2 x 0.5 x 0.2 cm white-pink tissue fragment. The specimen is bisected. All, 1 block.

H. In formalin labeled "right ovarian ligament", is a 1.2 x 0.6 x 0.5 cm white-pink to purple tissue fragment. Bisecting reveals a 0.3 x 0.3 cm unilocular cyst filled with brown, thin fluid. The cyst lining is tan, smooth, and measures less than 0.1 cm in thickness. All, 1 block.

I. In formalin labeled "right ovarian fossa", are 2, 2.2 x 0.5 x 0.1 cm and 1.1 x 1.0 x 0.4 cm tan-pink tissue fragments. The smaller fragment is trisected. All, 1 block.

J. In formalin labeled "right uterosacral ligament" is a 1.2 x 0.8 x 0.4 cm tan-pink tissue fragment. The specimen is bisected. All, 1 block.
