

## Surgical Pathology Report

### SPECIMEN(S) RECEIVED

A: Endocervical curettings  
B: Endometrial curetting  
C: Left iliac artery  
D: Left periureteral, biopsy  
E: Left cul de sac, biopsy  
F: Right alamaster, biopsy  
G: Right fallopian tube cyst  
H: Left ovarian fossa  
I: Bladder flap, biopsy

### CLINICAL INFORMATION

N/A.

### PRE OP DIAGNOSIS

FAMILY HISTORY OF ENDOMETRIOSIS IRREGULAR MENSES BILATERAL PELVIC PAIN PELVIC AND PERINEAL PAIN BILA

### FINAL DIAGNOSIS

- A. Endocervical curettings:  
Benign endocervical tissue.
- B. Endometrial curettings:  
Benign proliferative type endometrium.
- C. Left iliac artery:  
Fibroconnective tissue with focal endometriosis.
- D. Left periureteral, biopsy:  
Fibroconnective tissue with focal endometriosis.
- E. Left cul de sac, biopsy:  
Benign fibroconnective tissue.
- F. Right alamaster, biopsy:  
Benign fibroadipose tissue.
- G. Right fallopian tube cyst:  
Consistent with benign paratubal cyst.
- H. Left ovarian fossa:  
Benign fibroconnective tissue with focal endometriosis.
- I. Bladder flap, biopsy:

**Surgical Pathology Report**

P

Endometriosis and fibroconnective tissue.

**GROSS DESCRIPTION**

A. Received in formalin labeled "endocervical curetting" is a 1.5 x 1.0 cm aggregate of tan soft tissue fragments admixed with blood tinged mucoid material. Entirely submitted in one cassette.

B. Received in formalin labeled "endometrial curetting" is a 1.5 x 1.0 cm aggregate of tan-brown soft tissue fragments. Entirely submitted in one cassette.

C. Received in formalin labeled "left iliac artery" is a white-yellow soft tissue fragment that measures 0.6 x 0.4 cm. Entirely submitted in one cassette.

D. Received in formalin labeled "left periureteral" is a yellow-tan soft tissue fragment that measures 1.1 x 0.5 cm. Entirely submitted in one cassette.

E. Received in formalin labeled "left cul-de-sac" is a yellow-tan soft tissue fragment, 1.4 x 0.6 cm. The specimen is bisected and entirely submitted in one cassette.

F. Received in formalin labeled "right adnax" are two tan soft tissue fragments, 0.7 x 0.3 cm and 1.6 x 0.6 cm. The larger fragment is bisected and the specimen is entirely submitted in one cassette.

G. Received in formalin labeled "right fallopian tube cyst" is a tan collapsed cystic structure that measures 0.9 x 0.8 x 0.5 cm. The specimen is trisected to reveal a unilocular cystic space that is devoid of contents. Entirely submitted in one cassette.

H. Received in formalin labeled "left ovarian fossa" are two tan-gray soft tissue fragments, 0.5 x 0.3 cm and 0.7 x 0.5 cm. Entirely submitted in one cassette.

I. Received in formalin labeled "bladder flap" is a tan-gray strip of soft tissue that measures 2.0 x 0.4 cm. Entirely submitted in one cassette.

Gross Description of Specimens, Melanoma Medical Center, 10000 G Street, Suite 100, Fairfax, VA 22031
